

YIMING WANG

BSc Computer Science with Artificial Intelligence

✉ pleasure9876@qq.com | 🌐 <https://yiming1234.cn>
🔗 [Pleasurecruise](#) | 🐦 [Pleasure9876](#)

BASICS

Impact-driven Computer Science student specialising in AI and full-stack development, blending research rigour with production delivery. Experienced in TypeScript, Vue, and React with front-end internship experience and core contributions to large-scale open-source projects. Seeking end-to-end ownership from requirements through deployment.

EDUCATION

University of Nottingham

Bachelor, Computer Science with Artificial Intelligence

Sep 2025–Present

University of Nottingham Ningbo China

Bachelor, Computer Science, Score: 3.85

Sep 2023–Jun 2025

Foundation Year GPA 3.8/4.0, First Year GPA 3.85/4.0, Top 20% of cohort

WORK

Front-end Engineer Intern

Apr 2025–May 2025

Shanghai HRG Information Technology Co.

Led front-end development of the Plants vs. Zombies 2 UGC upload platform end-to-end:

- Built high-fidelity UI using shadcn-vue, lucide-vue-next, and Tailwind CSS
- Implemented multi-page navigation with Vue Router; unified Axios interceptors for request handling and auth
- Deployed test environments for front and back end; resolved cross-origin issues and validated API contracts
- Collaborated with QA on unit testing and bug fixes to improve system stability

Research Intern

Jun 2025–Aug 2025

Ningbo Global Innovation Center, Zhejiang University

- Reimplemented the Mamba-TasNet speech separation pipeline to align with published benchmarks across Mandarin and English datasets
- Automated data preprocessing and mixed-precision training workflows, improving iteration speed on the centre's compute cluster
- Delivered weekly experiment updates to the research group to inform deployment plans for forthcoming pilots

LANGUAGES

Chinese: Native or Bilingual Proficiency

English: Full Professional Proficiency

SKILLS

Programming Languages: Expert **Keywords:** TypeScript (Expert), Java (Advanced), Python, Go, C++, JavaScript, HTML / CSS

Frameworks: Advanced

Keywords: React, Next.js, Node.js, Vue3, UniApp, Electron, Tauri, Spring Boot

Data & Tooling: Advanced

Keywords: Docker, PostgreSQL, MongoDB, MySQL, Nginx, Git / GitHub

AWARDS

HackNotts 2025 Participant

Oct 2025

University of Nottingham

LeedsHack 2026 Participant

Feb 2026

University of Leeds

PROJECTS

Cherry Studio

Feb 2025–Present

Cross-platform AI Desktop Client · Core Maintainer

<https://github.com/CherryHQ/cherry-studio>

Open-source · 40k+ GitHub Stars · Electron + TypeScript

- Provider config: designed dynamic validation and fault-tolerance for API Key verification and Endpoint routing; improved error feedback with actionable recovery suggestions
- Conversation import: built history import module handling heterogeneous data formats; optimised local storage and UI consistency
- UI stability: fixed race conditions and state bugs in note sorting, tab navigation, and drag-and-drop ordering
- i18n & docs: added internationalisation for core views; wrote bilingual API docs and contribution guide to lower onboarding friction

Keywords: Electron, React, TypeScript

Cherry Studio App

Feb 2025–Present

Cross-platform Mobile AI Client · Core Developer

<https://github.com/CherryHQ/cherry-studio-app>

Open-source · 2k+ GitHub Stars · Expo + React Native

- State management: designed global state architecture with Redux Toolkit (conversation history, model state, user config); async middleware ensures consistency and reduces UI jank
- UI components: built conversation list, message detail, and model switcher; implemented dark/light theme adaptation
- Local storage: integrated Drizzle ORM for offline session viewing and config caching; optimised high-concurrency read/write performance

Keywords: React Native, Expo, TypeScript

NottinghamWall

Jun 2024–Dec 2024

Campus WeChat Mini-program

<https://github.com/CompPsyUnion/NottinghamWall>

Full-stack campus forum built to fill the gap in student tech community tooling

- Stack: Spring Boot + MyBatis RESTful API, Vue3 + Element Plus admin panel, UniApp WeChat Mini-program
- Auth: JWT-based RBAC system with three permission tiers (admin / user / guest)
- Performance: virtual list for smooth topic feed scrolling; WeChat sensitive-word filter and Alibaba Cloud OSS image moderation
- Traction: 290+ GitHub Stars, 150+ cumulative users

Keywords: Spring Boot, Vue3, UniApp

hacknotts-cli

Oct 2025–Oct 2025

AI-powered Interactive CLI — HackNotts 2025

<https://github.com/Pleasurecruise/hacknotts-cli>

HackNotts 2025 hackathon project

- Built elegant terminal UI with TypeScript + Node.js + React (Ink)
- Integrated OpenAI, Anthropic, Google, xAI providers with real-time switching and streaming responses
- Designed plugin system and MCP (Model Context Protocol) extension architecture; built-in command management and history export (JSON/Markdown)

Keywords: TypeScript, Node.js, MCP

Digital Pet

Feb 2026–Feb 2026

AI Interactive Desktop Pet — LeedsHack 2026

<https://github.com/Pleasurecruise/leedshack-digitalpet>

LeedsHack 2026 hackathon project

- Implemented interactive desktop pet logic inspired by BongoCat using TypeScript + Vue + Tauri
- Integrated AI model to enhance pet behaviour (text/state generation); modular architecture for extending new interactions

Keywords: TypeScript, Vue, Tauri

My Monorepo

Jan 2026–Present

Front-end Monorepo Starter Template

<https://github.com/Pleasurecruise/my-monorepo>

Personal Monorepo base template inspired by midday and create-t3-turbo

- TurboRepo + pnpm Workspaces for efficient dependency management and task orchestration (build/test/run)
- Stack: TypeScript, Vite, Vitest, Rollup; configured oxfmt formatting and oxlint code style enforcement

Keywords: TurboRepo, pnpm, TypeScript

Medical Image Analysis with Deep Learning

Jun 2025–Aug 2025

Research Project —University of Nottingham

- Designed CNN and Vision Transformer architectures for disease detection and abnormality classification from X-rays, MRIs, and CT scans
- Completed image preprocessing, data augmentation, and model evaluation to improve diagnostic efficiency and reduce annotation workload
- Delivered weekly progress reports with actionable outcomes within a fixed research timeline

Keywords: Python, PyTorch, TensorFlow
