

YIMING WANG

Computer Science with AI Undergraduate | AI Agents & Full-stack Engineering

✉ pleasure9876@qq.com | 🌐 <https://yiming1234.cn>

🔗 [Pleasurecruise](#) | 🐦 [Pleasure9876](#)

BASICS

Computer Science student focused on AI agents and full-stack product engineering, with experience spanning research experiments, production implementation, and end-to-end delivery. Core contributor to the 50k+ star Cherry Studio ecosystem, third-prize winner in the AdventureX 2026 PandaAI quantitative trading track, and independent builder of multiple cloud-native products.

EDUCATION

University of Nottingham

Bachelor, Computer Science with Artificial Intelligence, Score: 3.85

Sep 2025–Jun 2027

Year 2 GPA 3.85/4.0, Top 20% of cohort

University of Nottingham Ningbo China

Bachelor, Computer Science, Score: 3.85

Sep 2023–Jun 2025

Foundation Year GPA 3.8/4.0, First Year GPA 3.85/4.0, Top 20% of cohort

WORK

Open-source Software Engineer Intern (Cherry Studio)

Jun 2026–Present

Shanghai Qianhui Technology Co., Ltd.

Maintain the 50k+ star cross-platform Cherry Studio AI desktop client within the startup behind the project

- Deliver features and fixes across Agent Runtime, models and providers, Code CLI integrations, data migration, and desktop interaction layers
- Landed 42 commits in the main repository during summer 2026, including system skill discovery, an image-generation agent tool, provider-aware speed controls, and interactive QR authentication
- Expanded native integrations for Kimi Code, Qoder, Claude Code, and OpenClaw while addressing user-data migration, dependency security, and API key protection

Research Intern

Jun 2025–Aug 2025

Ningbo Global Innovation Center, Zhejiang University

- Reimplemented the Mamba-TasNet speech separation pipeline to align with published benchmarks across Mandarin and English datasets
- Automated data preprocessing and mixed-precision training workflows, improving iteration speed on the centre's compute cluster
- Delivered weekly experiment updates to the research group to inform deployment plans for forthcoming pilots

FoSE Undergraduate Research Practice Intern

Jun 2025–Aug 2025

Department of Computer Science, University of Nottingham Ningbo China

Faculty of Science and Engineering Student Extra-Curriculum Programme 2024–2025 · Undergraduate Research Practice (In-semester Round) · Supervisor: Chin Poo Lee

- Integrated U-Net's encoder-decoder design with Mamba selective state-space modelling in an nnU-Net-based BTCV multi-organ segmentation pipeline
- Improved Dice from 82.33 to 83.94 and reduced 95HD from 6.92 to 5.68 versus nnU-Net, while cutting parameters from 88M to 60M
- Reproduced models, conducted quantitative and qualitative evaluation, and delivered the final research poster across CNN, Vision Mamba, Vision Transformer, and U-Net methods

Front-end Engineer Intern

Apr 2025–May 2025

Shanghai Huorong Information Technology Co., Ltd.

Led front-end development of the Plants vs. Zombies 2 UGC upload platform end-to-end:

- Built high-fidelity UI using shadcn-vue, lucide-vue-next, and Tailwind CSS
- Implemented navigation with Vue Router and unified Axios interceptors for request forwarding and authentication

- Deployed front-end and back-end test environments, validated request/response models against API documentation, and resolved cross-origin integration issues
- Collaborated with QA on unit testing, bug fixes, and performance improvements

Java Development Engineer Intern

Apr 2024–May 2024

Jiangsu Itcast Education Technology Co., Ltd.

- Applied Java knowledge to production-oriented development tasks within the Product Development Department and delivered assigned work on schedule
- Collaborated with supervisors and colleagues on requirements, problem-solving, and day-to-day engineering delivery

LANGUAGES

Chinese: Native or Bilingual Proficiency

English: Full Professional Proficiency

SKILLS

Programming Languages: Advanced

Keywords: TypeScript, Java, Python, Go, C++, JavaScript

Front-end & Cross-platform: Advanced

Keywords: React, React Native, Next.js, Vue 3, SvelteKit, SolidJS, UniApp,

Electron, Expo, HTML / CSS, Tailwind CSS

Back-end & Databases: Advanced

Keywords: Node.js, Hono, Spring Boot, MyBatis, PostgreSQL, MySQL, MongoDB,

SQLite, Cloudflare D1, Drizzle ORM

AI & Agent Engineering: Advanced

Keywords: LLM API Integration, AzA Protocol, MCP, Multi-agent Orchestration,

Structured Tool Calling, PyTorch / Deep Learning

Engineering & Cloud: Advanced

Keywords: Docker, Nginx, Cloudflare Workers, Cloudflare R2 / KV, Bun, pnpm, Git /

GitHub, Vitest, CI/CD

AWARDS

Third Prize, AdventureX 2026 PandaAI "Trading the Future" Quantitative Trading Track

Jul 2026

AdventureX / PandaAI

PROJECTS

Cherry Studio

Feb 2025–Present

Cross-platform AI Desktop Client · Core Contributor

<https://github.com/CherryHQ/cherry-studio>

Large-scale open-source project · 50k+ GitHub Stars · Electron + React + TypeScript

- Agent capabilities: implemented system skill discovery, an image-generation Agent/Chat tool, interactive QR authentication for channels, and endpoint routing for mixed-provider models
- CLI ecosystem: evolved Kimi Code, Qoder, Claude Code, and OpenClaw integrations with native configuration persistence and feature parity
- Data and architecture: completed pre-boot user-data relocation, migrated ImportService from Redux to DataApi, and protected user-default models during reconciliation
- Reliability and security: fixed editor, message-selection, conversation-tab, and provider-setting issues while resolving critical dependency vulnerabilities and hardening API key handling

Keywords: Electron, React, TypeScript

Assay

Jul 2026–Jul 2026

Strategy Credibility Audit Agent · Third Prize, AdventureX 2026 PandaAI Trading Track <https://github.com/Pleasurecruise/assay>

Built an independent quality-assurance layer for AI trading ecosystems that validates alpha claims without recommending securities, predicting markets, or promising returns

- Designed five isolated checks running in parallel across parameter robustness, data availability, transaction-cost stress, market-regime dependency, and signal homogeneity/decay
- Introduced Moiré cross-validation to resolve conflicting findings through discriminating follow-up experiments, followed by deterministic five-level verdicts and reproducible evidence
- Implemented natural-language intake, deterministic StrategySpec validation and freezing, a structured backtester, and versioned JSON/Markdown Artifacts

- Packaged the system as an A2A Remote Agent with task-state streaming and protocol-level cancellation for multi-agent trading workflows

Keywords: A2A, TypeScript, React, Python, Bun

Cherry Studio App

Feb 2025–Present

Cross-platform Mobile AI Client · Core Contributor

<https://github.com/CherryHQ/cherry-studio-app>

Open-source · 3k+ GitHub Stars · Expo + React Native

- Designed global state for conversation history, model state, and user preferences with Redux Toolkit and asynchronous middleware
- Built core conversation-list, message-detail, and model-switching components with adaptive dark and light themes
- Integrated Drizzle ORM as a lightweight local data layer for offline history access and configuration caching

Keywords: React Native, Expo, TypeScript

my-memos

May 2026–Present

Cloud-native Personal Knowledge App with AI and MCP

<https://github.com/Pleasurecruise/my-memos>

Independently designed and deployed a personal knowledge product at memos.you-find.me

- Built a full-stack SvelteKit application on Cloudflare Workers, using D1 for indexes and searchable mirrors, R2 for canonical Markdown, and KV for disposable caches
- Integrated Better Auth with Google OAuth, single-user allowlisting, and server-side boundary validation for private data
- Added context-aware AI chat through Cloudflare AI Gateway with tools for searching, creating, updating, and deleting memos
- Exposed an API-key-protected Streamable HTTP MCP service and covered MCP, authorisation, message streaming, and storage services with unit tests

Keywords: SvelteKit, Cloudflare Workers, MCP, Drizzle ORM

my-moment

Jun 2026–Present

Cloud-native Personal Space for Photos, Journeys, and Collections

<https://github.com/Pleasurecruise/my-moment>

Independently designed and deployed a multi-module personal product at moment.you-find.me

- Built gallery, journey map, guestbook, and collection/wishlist modules with SolidJS, Hono, and Cloudflare Workers
- Implemented browser-side HEIC/HEIF conversion, batch uploads, and masonry/list views, with R2, D1, and KV separating media, business data, and caches
- Integrated Mapbox travel footprints, Better Auth, and a threaded infinite-scroll guestbook, backed by database migrations, CI, and service-level tests

Keywords: SolidJS, Hono, Cloudflare Workers, Mapbox

NottinghamWall

Jun 2024–Dec 2024

Campus WeChat Mini-program · Founder and Lead Developer

<https://github.com/CompPsyUnion/NottinghamWall>

Designed and delivered a multi-client open-source campus forum, reaching 150+ users and 250+ GitHub Stars

- Built the RESTful API with Spring Boot and MyBatis, the administration console with Vue 3 and Element Plus, and the WeChat client with UniApp
- Designed a three-tier JWT-based RBAC system and integrated WeChat sensitive-word detection with Alibaba Cloud OSS image moderation
- Optimised topic-feed scrolling with virtual lists and owned the product lifecycle from system design and deployment through early operations

Keywords: Spring Boot, Vue 3, UniApp

INTERESTS

Open Source: Translation: React/Flutter/MDN, OSS: docmost, blinko, lobehub, etc., Founded CompPsyUnion GitHub org, Deputy Director, CPU Club UNNC

Hackathons: Third Prize, AdventureX 2026 PandaAI Quantitative Trading Track, Participant, HackNotts 2025 and LeedsHack 2026
